Bridging the gap through business management software

Through the Seed Capital & Business Development facility (SC&BD), the Dutch Good Growth Fund (DGGF) provides venture debt to Kiu Global Limited (“Kiu”). Kiu is an early-stage technology company aiming to address the SME credit gap by offering lending-as-a-service to micro, small, and medium enterprises (MSMEs) and financial institutions. The company has operations in Vietnam, Cambodia, Myanmar, Thailand, Bangladesh, and the Philippines.

Kiu offers enterprise resource planning software for MSMEs to manage operations and basic accounting. On gathered data, Kiu’s credit scoring engine digitally builds the MSME creditworthiness. Partner Financial Institutions have access to that credit scoring, which forms the basis for their lending decision.

Kiu’s approach has the potential to structurally improve access to finance for MSMEs, which benefit from access to credit with seamless, quick turnaround; while FIs, on the other hand, can significantly reduce transaction costs in terms of underwriting, performance monitoring, and retention/repeat loans.

SC&BD is committed to funding innovative, high-impact business models such as Kiu to help them attract growth capital through their expansion stages.
